

ALUMINUM DUCT COUPLERS

Anodized for durability

KEY FEATURES

- Anodized finish creates a protective oxide layer on the surface of the aluminum, making it corrosion-resistant and highly durable
- Color-coded for simple size identification
- Compatible with all types of polyethylene conduit for versatility on the jobsite
- Two variations are available: reverse threaded or barbed to accommodate different methods of connections

The original color-coded JackMoon Aluminum Duct Couplers

The classic design of the JackMoon® product that you have come to know and trust. The Aluminum Duct Couplers are available in two styles—reverse-threaded and barbed—offering different methods to join conduit to get the perfect fit. With these couplers, you can be confident in the reliability and durability of your connections. With their color-coded anodized coating and ribbed external surface, these couplers are easy to identify and install while providing an excellent grip. They can be used in various telecommunication applications where HDPE conduit is utilized, including datacenters, tower infrastructure, and rural broadband.

The best-selling reverse-threaded couplers are tapered to accommodate a wide range of sizes standard in the telecom industry. In addition, this type of coupler is also designed with razor-sharp threading for easy installation by hand – no tools are required. The barbed couplers feature press-on installation, which requires a hydraulic coupling press.
